NEW QUESTION: 3 Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is the same in each question in this series. Start of repeated scenario You are creating reports for a car repair company. You have four datasets in Excel spreadsheets. Four workbook queries load the datasets to a data model. A sample of the data is shown in the Data Sample exhibit. Data Sample exhibit: The data model is shown in the Data Model exhibit. (Click the Exhibit button.) The tables in the model contain the following data: * DailyRepairs has a log of hours and revenue for each day, workshop, and repair type. Every day, a log entry is created for each

workshop, even if no hours or revenue are recorded for that day. Total Hours and Total Revenue column.* Workshops have a list of all the workshops and the current and previous workshop managers. The format of the Workshop Manager column is always Firstname Lastname. A value of 1 in the IsLatest column indicates that the workshop manager listed in the record is the current workshop manager.* RepairTypes has a list of all the repair types* Dates has a list of dates from 2015 to 2018End of repeated scenario.When you attempt to create a relationship between DailyRepairs and Workshops, Power Pivot generates the following error message: "The relationship cannot be created because each column contains duplicate values. Select at least one column that contains only unique values".You need to ensure that you can create a valid relationship between the tables.What should you do?**A.** In the Power Pivot model, change the data type for Workshop[ID] to General**B.** In the workbook query for Workshops, filter [IsLatest] to equal 1**C.** In the Power Pivot model, change the Table Behavior setting for Workshops**D.** In the workbook query for Workshops, add an index column**Answer: C**
