NEW QUESTION: 2A Development team is working on a serverless application in AWS. To quickly identify and remediate potential production issues, the team decides to roll out changes to a small number of users as a test before the full release. The DevOps Engineer must develop a solution to minimize downtime and impact. Which of the following solutions should be used to meet the requirements?(Select TWO.)**A.** Create an Application Load Balancer with two target groups. Set up the Application Load Balancer for Amazon API Gateway private integration. Associate one target group to the current version and the other target group to the new version. Configure API Gateway to route 10% of incoming traffic to the new version. As the new version becomes stable, configure API Gateway to send all traffic to the new version and detach the old version from the load balancer.**B.** Create a rollover record set in AWS Route 53 pointing to the AWS Lambda endpoints for the old and new versions. Configure Route 53 to route 10% of incoming traffic to the new version. As the new version becomes stable, update the DNS record to route all traffic to the new version.**C.** Create an alias for an AWS Lambda function pointing to both the current and new versions. Configure the alias to route 10% of incoming traffic to the new version. As the new version is considered stable, update the alias to route all traffic to the new version.**D.** Create an ELB Network Load Balancer with two target

NEW QUESTION: 3Which UnityVSA user interface allows advanced users to create scripts for automating routine tasks?**A.** Unisphere GUI**B.** Unisphere Central**C.** SP Console**D.** UEMCLI

Answer: DExplanation:Explanation/Reference:Unisphere Command Line Interface (UEMCLI) is an interface that allows a user to perform tasks on the storage system by typing commands instead of using the graphical user interface.Note: Representational State Transfer (REST) is a management API that allows clients to interact with UnityVSA using standard HTTP mechanisms and semantics. Operations that can be performed in Unisphere or UEMCLI can also be performed using REST API.Application developers can access REST API with any programming or scripting language capable of making HTTP requests, without requiring a separate client.
