NEW QUESTION: 1 Is not a valid option for configuring redundancy for ASM disk groups?**A.** Normal**B.** External**C.** High**D.** Internal**Answer: D****Explanation:** There are three types of disk groups based on the ASM redundancy level. The redundancy levels are: *External redundancy ASM does not provide mirroring redundancy and relies on the storage system to provide RAID functionality. Any write error cause a forced dismount of the disk group. All disks must be located to successfully mount the disk group. *Normal redundancy ASM provides two-way mirroring. By default all files are mirrored so that there are two copies of every data extent. A loss of one ASM disk is tolerated. *High redundancy ASM provides triple mirroring by default. A loss of two ASM disks in different failure groups is tolerated. Reference: Oracle Database Storage Administrator's Guide, ASM Mirroring and Disk Group Redundancy

NEW QUESTION: 2 Which of the following is NOT a potential outcome of a poor decision making process by the individual in resolving to pursue an international assignment?**A.** Home country manager addresses problems quickly and thoroughly while the individual is on assignment**B.** Individual evaluates aspects of the international assignment incorrectly due to the lack of knowledge in doing so**C.** Unrealistic expectations about assignment**D.** Dissatisfaction by assignee's family**Answer: A**

NEW QUESTION: 3 A company has an application behind a load balancer with enough Amazon EC2 instances to satisfy peak demand. Scripts and third-party deployment solutions are used to configure EC2 instances when demand increases or an instance fails. The team must periodically evaluate the utilization of the instance types to ensure that the correct sizes are deployed. How can this workload be optimized to meet these requirements?**A.** Deploy the application as a Docker image by using Amazon ECS. Set up Amazon EC2 Auto Scaling and Amazon ECS scaling. Register for AWS Business Support and use Trusted Advisor checks to provide suggestions on cost savings.**B.** Deploy the application by using AWS Elastic Beanstalk with default options. Register for an AWS Support Developer plan. Review the instance usage for the application by using Amazon CloudWatch, and identify less expensive instances that can handle the load. Hold monthly meetings to review new instance types and determine whether Reserved instances should be purchased.**C.** Use CloudFormer to create AWS CloudFormation

stacks from the current resources. Deploy that stack by using AWS CloudFormation in the same region. Use Amazon CloudWatch alarms to send notifications about underutilized resources to provide cost-savings suggestions. **D.** Create an Auto Scaling group to scale the instances, and use AWS CodeDeploy to perform the configuration. Change from a load balancer to an Application Load Balancer. Purchase a third-party product that provides suggestions for cost savings on AWS resources. **Answer: C**
