We are equipped with excellent materials covering most of knowledge points of OMG-OCSMP-MU100 latest training torrent.

NEW QUESTION: 1You need to set up a complex network infrastructure for your organization that will be reasonably easy to deploy, replicate, control, and track changes on. Which AWS service would be best to use to help you accomplish this?**A.** AWS Import/Export**B.** Amazon Route 53**C.** Amazon CloudWatch**D.** AWS CloudFormation**Answer: D****Explanation:**AWS CloudFormation is a service that helps you model and set up your Amazon Web Services resources so that you can spend less time managing those resources and more time focusing on your applications that run in AWS. You create a template that describes all the AWS resources that you want (like Amazon EC2 instances or Amazon RDS DB instances), and AWS CloudFormation takes care of provisioning and configuring those resources for you. You don't need to individually create and configure AWS resources and figure out what's dependent on what. AWS CloudFormation handles all of that.**Reference:**
<http://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/Welcome.html>

NEW QUESTION: 2You need to store a Java long primitive attribute, called customerOID, into the session scope. Which two code snippets allow you to insert this value into the session? (Choose two.)**A.** long customerOID = 47L; session.setAttribute("customerOID", new Long(customerOID));**B.** long customerOID = 47L; session.setNumericAttribute("customerOID", new Long(customerOID));**C.** long customerOID = 47L; session.setLongAttribute("customerOID", customerOID);**D.** long customerOID = 47L; session.setAttribute("customerOID", customerOID);**E.** long customerOID = 47L; session.setNumericAttribute("customerOID", customerOID);**F.** long customerOID = 47L; session.setLongAttribute("customerOID", new Long(customerOID));**Answer: A,D**

NEW QUESTION: 3A database recovery operation (RECOVER DATABASE) failed during the roll forward phase. The DBA wants to force the RECOVER DATABASE to redo the restore phase. What must occur to accomplish this?**A.** A RECOVER DATABASE command must be re-issued with the REPLACE option specified.**B.** A RECOVER DATABASE command must be issued with the TO END OF LOGS option specified.**C.** The RECOVER DATABASE operation must be terminated and a new RECOVER DATABASE command must be issued.**D.** A RECOVER DATABASE command must be issued with the RESTART option specified.**Answer: D**
