NEW QUESTION: 1A. Option B B. Option C C. Option D D. Option A Answer: C

NEW QUESTION: 2

Netflowがそれらをネットワークフローと見なすためにパケットのシーケンス内で同じでなければならぬ3つの値は何ですか？（3つ選んでください。）**A. 送信元MACアドレス B.**

入カインタフェース C. 出力インタフェース D. 宛先IPアドレス E. IPネクストホップ F.

送信元IPアドレス Answer: B,D,F Explanation: Each packet that is forwarded within a router or switch is examined for a set of IP packet attributes. These attributes are the IP packet identity or fingerprint of the packet and determine if the packet is unique or similar to other packets. Traditionally, an IP Flow is based on a set of 5 and up to 7 IP packet attributes. IP Packet attributes used by NetFlow: IP source address IP destination address Source port Destination port Layer 3 protocol type Class of Service Router or switch interface All packets with the same source/destination IP address, source/destination ports, protocol interface and class of service are grouped into a flow and then packets and bytes are tallied. This methodology of fingerprinting or determining a flow is scalable because a large amount of network information is condensed into a database of NetFlow information called the NetFlow cache.
