NEW QUESTION: 3 Which of the following statements best describes the result of issuing the instance 3 vlns 7 command? **A.** Seven VLANs are mapped to MST instance 3. **B.** VLAN 7 is mapped to MST instance 3. **C.** VLAN 7 is mapped to three MST instances. **D.** VLAN 7 is mapped to switchport 3. **Answer: B** Explanation: Explanation/Reference: Explanation: When the instance 3 vlns 7 command is issued, the virtual local area network (VLAN) 7 is mapped to Multiple Spanning Tree (MST) Protocol instance 3. MST, which is defined by the 802.1s standard, maps a distinct group of VLANs to one STP instance. Multiple STP instances can be used with MST. The Cisco implementation of MST supports 256 instances. However, each instance must support a different group of VLANs because each VLAN can only be mapped to one instance. To map one or more VLANs to an MST instance, issue the instance instance-ID vlns vlan-range command, where ID is the number of the MST instance and vlan-range is the VLAN or VLANs that should be mapped to the instance. For example, the command instance 1 vlns 14-16,99 maps VLANs 14 through 16 and VLAN 99 to MST instance 1. The instance 3 vlns 7 command will not map VLAN 7 to switchport 3. The instance vlns command cannot be used to map multiple instances to a

single VLAN. Each VLAN can only be mapped to one instance. When the instance 3 vlans 7 command is issued, only a single VLAN will be mapped to MST instance 3.Objective:Layer 2 TechnologiesSub-Objective:Configure and verify spanning treeReferences:Cisco IOS LAN Switching Command Reference > bridge-domain through instance (VLAN) > instance (VLAN) Cisco > Support > Technology Support > LAN Switching > Spanning Tree Protocol > Technology Information > Technology White Paper > Understanding Multiple Spanning Tree Protocol (802.1s) > Document ID: 24248
