NEW QUESTION: 1What is the maximum key size for the RC5 algorithm?**A.** 2040 bits**B.** 256 bits**C.** 1024 bits**D.** 128 bits**Answer: A****Explanation:**RC5 is a fast block cipher created by Ron Rivest and analyzed by RSA DataSecurity, Inc.It is a parameterized algorithm with a variable block size, a variable key size, and a variable number of rounds.Allowable choices for the block size are 32 bits (for experimentation and evaluation purposes only), 64 bits (for use as a drop-in replacement for DES), and 128 bits.The number of rounds can range from 0 to 255, while the key can range from 0 bits to 2040 bits in size.Please note that some sources such as the latest Shon Harris book mentions that RC5 maximum key size is of 2048, not 2040 bits. I would definitely use RSA as the authoritative source which specifies a key of 2040 bits. It is an error in Shon's book.The OIG book says:RC5 was developed by Ron Rivest of RSA and is deployed in many of RSA's products. It is a very adaptable product useful for many applications, ranging from software to hardware implementations. The key for RC5 can vary from 0 to 2040 bits, the number of rounds it executes can be adjusted from 0 to 255, and the length of the input words can also be chosen from 16-, 32-, and 64-bit lengths.The following answers were incorrect choices:All of the other answers were wrong.Reference(s) used for this question:Schneiter, Andrew (2013-04-15).
