It makes a person capable of attempting complex CCA-N certificates, If you have any question about our 1Y0-231 learning engine, our service will give you the most professional suggestion and help.

NEW QUESTION: 1Which of the following best describes a commit?**A.** With every commit, a new local repository is created.**B.** With every commit, GIT create a new branch.**C.** With every commit, GIT takes a snapshot of the current state of the underlying files.**D.** A commit in GIT is a local operation.**Answer: C**

NEW QUESTION: 2Your customer has three sites defines in the system, site 1, site 2, and site 3. All sites have their own billing strategy defined and Balance Forward Billing is enabled for site 1 and site 2 at the account level.How will bills be generated?**A.** Sites 1, 2, and 3 activities will be included in a single bill.**B.** Sites 1 and 3 activities will be included in a single bill.**C.** Sites 2 and 3 activities will be included in a single bill.**D.** Sites 1 and 2 activities will be included in a single bill.**Answer: D**Explanation:Explanation/Reference:Explanation:Account-level balance forward billing lets you send one bill for each operating unit of an account to the primary bill-to site of the account, instead of a separate bill for each site. You need not set all sites under an account for balance forward billing.Note: You must enable balance forward billing for a customer both at the account and site profile level in order for Receivables to pick any transactions of the customer. If balance forward billing is enabled at the site profile level but not at the account profile level, the application does not recognize the site as a balance forward billing site. Although transactions for the site continue to inherit the balance forward billing payment term, Receivables never picks them up.References:
