NEW QUESTION: 3What is the main issue with media reuse?**A. Media destruction****B. Data remanence****C. Degaussing****D. Purging****Answer: B****Explanation:**Explanation/Reference:Explanation: The main issue with media reuse is data remanence, where residual information still resides on the media.Data Remanence is the problem of residual information remaining on the media after erasure, which may be subject to restoration by another user, thereby resulting in a loss of confidentiality. Diskettes, hard drives, tapes, and any magnetic or writable media are susceptible to data remanence. Retrieving the bits and pieces of data that have not been thoroughly removed from storage media is a common method of computer forensics, and is often used by law enforcement personnel to preserve evidence and to construct a trail of

misuse. Anytime a storage medium is reused (and also when it is discarded), there is the potential for the media's information to be retrieved. Methods must be employed to properly destroy the existing data to ensure that no residual data is available to new users. The "Orange Book" standard recommends that magnetic media be formatted seven times before discard or reuse. Incorrect Answers: A: Degaussing is a method used to ensure that there is no residual data left on the media. This is not the main issue with media reuse. C: Media destruction as the name suggests is the destruction of media. This is not the main issue with media reuse. D: Purging is another method used to ensure that there is no residual data left on the media. This is not the main issue with media reuse.
