Explanation:

NEW QUESTION: 2A user reports that when they are using Cisco Unified Personal Communicator, their status does not change when they are on the phone. What is the typical cause of this issue?**A.** The Cisco Unified Presence account is locked out.**B.** Cisco Unified Presence is not enabled for the line.**C.** The user is not associated with the line.**D.** The username or password is invalid.**E.** Cisco Unified Presence is not enabled for the user.**Answer: C**

NEW QUESTION: 3You are implementing logging in your services that will be running in Oracle Cloud Infrastructure Container Engine for Kubernetes. Which statement describes **A.**
すべてのサービスは標準出力のみにログを記録します。 **B.**
すべてのサービスが共有ログファイルに記録します。 **C.**
各サービスは独自のログファイルに記録します。 **D.**
すべてのサービスは、外部のログシステムにログを記録します。 **Answer: A**
ExplanationApplication and systems logs can help you understand what is happening inside your cluster. The logs are particularly useful for debugging problems and monitoring cluster activity. Most modern applications have some kind of logging mechanism; as such, most container engines are likewise designed to support some kind of logging. The easiest and most embraced logging method for containerized applications is to write to the standard output and standard error streams.Kubernetes also provides cluster-based logging to record container activity into a central logging subsystem. The standard output and standard error output of each container in a Kubernetes cluster can be ingested using an agent like Fluentd running on each node into tools like Elasticsearch and viewed with Kibana. And finally, monitor containers, pods, applications, services, and other components of your cluster.One can use tools such as Prometheus, Grafana, Jaeger for monitoring, visibility, and tracing the cluster.References:
