NEW QUESTION: 1The application placement controller has been configured with elasticity mode enabled. Intermittently, all instances of a dynamic cluster are removed. After further review, the system administrator noticed that it occurs during peak load on another dynamic cluster. The administrator wants to keep at least one instance available. Which configuration is needed in the dynamic clusters?**A.** Disable the option "If other dynamic clusters need resources, stop all instances of this cluster during periods of inactivity".**B.** Enable application lazy start with elasticity mode.**C.** Set the Number of instances to a value greater than zero.**D.** Set the `proactiveIdleStopcustom` property to true**Answer: C**

NEW QUESTION: 2Which methods are supported by OWSM to attach web services policy to a SCA composite? (Choose all correct answers)**A.** Attach a policy in JDeveloper and deploy with normal deployment**B.** Attach a policy via the command line interface**C.** None of the above**D.** Attach a policy in the EM console after deployment**Answer: A,D****Explanation:** There are only 2 ways you can attach web services policy to a SCA composite: JDeveloper and the Enterprise Manager console. **Attaching Policy Files to Web Services and Clients** There are two ways to attach policies to Web service clients and Web services: at the client and service design time, and post deployment. Post-deployment, you attach security and management policies to SOA composites, ADF, and WebCenter applications using the Oracle Enterprise Manager Fusion Middleware Control. This method provides the most power and flexibility because it moves Webservice security to the control of the security administrator. At design time, Oracle JDeveloper automates ADF and SOA client policy attachment. Or, you can attach Oracle WSM security and management policies to applications programmatically. You typically do this using your favorite IDE, such as Oracle JDeveloper. **Reference**
