NEW QUESTION: 1

ソリューションアーキテクトは、ロードバランサーを使用してWebSocketをサポートするHTTP / HTTPSサービスをAmazon EC2インスタンスにデプロイする必要があります。

アーキテクトはこれらの要件をどのように満たすことができますか？**A.**

レイヤー4バランサーの構成**B.** クラシックロードバランサーの構成**C.**

ネットワークロードバランサーの構成**D.** Application Load Balancerの構成**Answer: D**

NEW QUESTION: 2TSM for Virtual Environments does which of the following?**A.** Better utilization across many different types of disk**B.** Allows VMware to backup via the vStorage API **C.** Pooled physical resources are consumed by virtual machines resulting in high asset utilization**D.** Provides a common set of value capabilities and centralized management on Zen Environments**Answer: B**

Explanation: Tivoli Storage Manager for Virtual Environments:
*Simplifies the management of the backup and restore processes for virtual machines-provides an easier-to-use GUI that you can access from within VMware vCenter. *Enables faster, more frequent protection for virtual machines-offloads the backup workload from virtual machines and production VMware ESX hosts to vStorage backup servers. *Eliminates overhead with centralized vStorage backup-supports the VMware vStorage APIs for Data Protection technology, which simplifies and optimizes data protection. This technology conducts operations on the backup and management servers rather than the virtual machines, greatly reducing system overhead and any disruption that backups might cause to virtualized applications. *Retrieves data from image-level backups-gives you the flexibility to perform a file-level, volume-level or VM image-level recovery using a single backup of a virtual machine image.
