NEW QUESTION: 1 Which of the following statements pertaining to the trusted computing base (TCB) is false? **A.** It is defined in the Orange Book. **B.** It includes hardware, firmware and software. **C.** A higher TCB rating will require that details of their testing procedures and documentation be reviewed with more granularity. **D.** Its enforcement of security policy is independent of parameters supplied by system administrators. **Answer: D** **Explanation:** The ability of a TCB to correctly enforce a security policy depends solely on the mechanisms within it and the correct input by system administrative personnel of parameters related to security policy. For example, if Jane only has a "CONFIDENTIAL" clearance, a system administrator could foil the correct operation of a TCB by providing input to the system that gave her a "SECRET" clearance. "It is defined in the Orange Book" is an incorrect choice. The TCB is defined in the Orange Book (TCSEC or Trusted Computer System Evaluation Criteria). "It includes hardware, firmware and software" is incorrect. The TCB does include the combination of all hardware, firmware and software responsible for enforcing the security policy. "A higher TCB rating will require that details of their testing procedures and documentation be reviewed with more granularity" is incorrect. As the level of trust increases (D through A), the level of scrutiny required during evaluation increases as well. **References:** CBK, pp. 323 - 324, 329 - 330 AIO3, pp. 269 - 272,

NEW QUESTION: 2 You enabled the guest session limit feature on the Cisco ISE. However, end users report that the same guest can log in from multiple devices simultaneously. Which configuration is missing on the network access device? **A.** DHCP required **B.** RADIUS authentication **C.** AAA override **D.** RADIUS accounting **Answer: D** **Explanation:** Explanation/Reference: Explanation:

NEW QUESTION: 3 DRAG DROP Drag and drop each SNMP security model and level on the left to the corresponding mode of authentication on the right. **Answer:** Explanation:

NEW QUESTION: 4 Which PKCS is invoked during IKE MM5 and MM6 when digital certificates are used as the authentication method?
A. PKCS#10 **B.** PKCS#7 **C.** PKCS#3 **D.** PKCS#13 **E.** PKCS#11
Answer: B
Explanation: The PKCS #7 standard describes a general syntax for data that may have cryptography applied to it, such as digital signatures and digital envelopes. The syntax admits recursion, so that, for example, one envelope can be nested inside another, or one party can sign digital data that has already been put into an envelope. It also allows arbitrary attributes, such as signing time, to be authenticated along with the content of a message. Further, it provides for other attributes, such as countersignatures, to be associated with a signature.
