Pass Certification Preparation for Platform App Builder Certification with Best Practice Exam Questions.

NEW QUESTION: 1 Refer to the exhibit. Which Linux command provides output that is similar to the output in the exhibit?
A. tcpdump -a
B. ifconfig -av
C. cat /etc/hosts
D. netstat -an
Answer: D

NEW QUESTION: 2 CORRECT TEXT Sustained, time-released tablets
Answer: Explanation: Active ingredient is released at a CONSTANT RATE for a prolonged period of time - long acting, delayed release, prolonged action

NEW QUESTION: 3 **A.** cat: cannot open file1 Hello, World
B. cat: cannot open file1
C. cat: cannot open file1 Hello, world
D. Hello, world
E. bash: syntax error near unexpected token '&&'
Answer: B
Explanation: First line (rm file1) deletes/removes file1. Second line captures the text into file2. The first part of line 3 (cat file1) fails as the file1 does not exist. The && (AND) operator will ensure that the third line fails. The result of line 3 will be the result of first part of line 3 (cat file1).
Note: cat - concatenate files and print on the standard output
Note #1: A list is a sequence of one or more pipelines separated by one of the operators ';', '&', '&&', or '|', and optionally terminated by one of ';', '&', or a newline. Of these list operators, '&&' and '|' have equal precedence, followed by ';' and '&', which have equal precedence. AND and OR lists are sequences of one or more pipelines separated by the control operators '&&' and '|', respectively. AND and OR lists are executed with left associativity. An AND list has the form command1 && command2 command2 is executed if, and only if, command1 returns an exit status of zero. An OR list has the form command1 | command2 command2 is executed if, and only if, command1 returns a non-zero exit status. The return status of AND and OR lists is the exit status of the last command executed in the list.
Note #2 (on exit status): Zero means command executed successfully, if exit status returns non-zero value then your command failed to execute.

NEW QUESTION: 4 Which NetApp technology can create multiple virtual controllers on a single NetApp storage system operating Data ONTAP 7-Mode?
A. FlexClone technology
B. The FlexShare tool
C. MultiStore software
D. Flash Pool
Answer: C
