**NEW QUESTION: 1**An investor holds \$1m in face each of two bonds. Bond 1 has a price of 90 and a duration of 5 years. Bond 2 has a price of 110 and a duration of 10 years. What is the combined duration of the portfolio in years?**A. 0B. 7.75C. 7.5D. 7.25****Answer: B****Explanation:** ExplanationThe value of Bond 1 is \$900,000 and the value of Bond 2 is \$1,100,000, or their respective weights in the portfolio are 45% and 55% respectively. The combined duration is the weighted average of their individual durations, ie  $(45\% \times 5) + (55\% \times 10) = 7.75$  years

**NEW QUESTION: 2**A server side SteelHead deployment is to be out-of-path (SSOOP). Which of the below are limitations compared to physical or virtual in-path? (Choose two.)**A. Data store synchronization is not possible.B. Only one SteelHead is supported on the server side.C. Port or full transparency is not supported.D. Only enhanced auto discovery can be used.E. Auto discovery is not supported.****Answer: B,E****Explanation:**A: OOP configuration does not support auto-discovery. You must create a fixed-target rule on the clientside Steelhead.C: An out-of-path deployment is generally located on the server-side and is often described as a server-side outof-path deployment.In an out-of-path deployment, only a SteelHead primary interface is required to connect to the network. The SteelHead can be connected anywhere in the LAN. An out-of-path SteelHead deployment does not have a redirecting device. You configure fixed-target in- path rules for the client-side SteelHead. The fixed-target in-path rules point to the primary IP address of the out-of-path SteelHead. The out-of-path SteelHead uses its primary IP address when communicating to the server. The remote SteelHead must be deployed either in a physical or virtual in-path mode.Incorrect:Not D: You can use RiOS data store synchronization between the out-of-path SteelHeads for additional benefits in case of a failure.Not E: OOP configuration does not support auto-discoveryReferences: SteelHead Deployment Guide Including the SteelCentral Controller for SteelHead Mobile, December 2014, page 352

**NEW QUESTION: 3**Your company has a single Active Directory forest with a single domain. Consultants in different departments of the company require access to different network

resources. The consultants belong to a global group named TempWorkers. Three file servers are placed in a new organizational unit named SecureServers. The file servers contain confidential data in shared folders. You need to prevent the consultants from accessing the confidential data. What should you do? **A.** On the three file servers, create a share on the root of each hard disk. Configure the Deny Full control permission for the TempWorkers global group on the share. **B.** Create a new Group Policy Object (GPO) and link it to the domain. Assign the Deny log on locally user right to the TempWorkers global group. **C.** Create a new Group Policy Object (GPO) and link it to the SecureServers organizational unit. Assign the Deny log on locally user right to the TempWorkers global group. **D.** Create a new Group Policy Object (GPO) and link it to the SecureServers organizational unit. Assign the Deny access to this computer from the network user right to the TempWorkers global group. **E.** Create a new Group Policy Object (GPO) and link it to the domain. Assign the Deny access to this computer from the network user right to the TempWorkers global group. **Answer: D**  
**Explanation:** Personal comment: Basically, you need to create a GPO for the Secure Servers and deny the TempWorkers access to the shared folders (implies access from the network). "Deny log on locally" makes no sense in this instance, because we are referring to shared folder and supposedly physical access to servers should be highly restricted. And best practices recommend that you link GPOs at the domain level only for domain wide purposes.

**NEW QUESTION: 4** Which three duty roles are required to perform Accounting Hub setup tasks?  
**A.** Subledger Accounting Manager **B.** Accounting Hub Integration **C.** Accounting Hub Maintenance **D.** Application Implementation Consultant **E.** Accounting Hub Administration  
**Answer: B, D, E**
