Our test engine is an exam simulation that makes our candidates feel the atmosphere of DS0-001 actual test and face the difficulty of certification exam ahead.

**NEW QUESTION: 1** Which of the following should be of PRIMARY concern to an IS auditor reviewing the management of external IT service providers?  
**A.** Minimizing costs for the services provided  
**B.** Evaluating the process for transferring knowledge to the IT department  
**C.** Determining if the services were provided as contracted  
**D.** Prohibiting the provider from subcontracting services  
**Answer: C**  
**Explanation:** From an IS auditor's perspective, the primary objective of auditing the management of service providers should be to determine if the services that were requested were provided in a way that is acceptable, seamless and in line with contractual agreements. Minimizing costs, if applicable and achievable (depending on the customer's need) is traditionally not part of an IS auditor's job. This would normally be done by a line management function within the IT department. Furthermore, during an audit, it is too late to minimize the costs for existing provider arrangements. Subcontracting providers could be a concern, but it would not be the primary concern. Transferring knowledge to the internal IT department might be desirable under certain circumstances, but should not be the primary concern of an IS auditor when auditing IT service providers and the management thereof.

**NEW QUESTION: 2** Refer to the exhibit. This portion of a Cisco IOS AP configuration refers to a multiple SSID and VLAN configuration. Which statement is false?  
**A.** The mbssid guest-mode command allows guest users to connect to the SSID.  
**B.** All SSIDs are broadcast by and visible to clients.  
**C.** The EAP SSID allows client to connect to it by using PEAP as an authentication method.  
**D.** The AP needs to have subinterfaces 80, 81, and 82 configured, both on the radio 0 and Ethernet interfaces.  
**Answer: A**

**NEW QUESTION: 3** DRAG DROP  
**Answer:** Explanation: Explanation: If a qos making (MPLS EXP) is

changed in the MPLS network, it is also changed in the egress IP Packet-- short-pipe mode. This provides QoS transparency where the customer QoS marking (for example, DSCP) in the IP Packet is preserved. The egress PE uses the original customer QoS marking instead of the service provider QoS marking--pipe mode. QoS is done on the output interface of the PE router that is based on the receive -----Uniform mode
