These two servers participate in an Always On Availability Group named ContosoAG1 that is configured to use synchronous-commit with automatic failover. The secondary replica is not configured for read-only access. The application performs both transactional processing and historical data retrieval in a database named ContosoDB. The application includes an inventory management module. The inventory management module and database have experienced performance issues. Users report mat a Query named inventoryQuery1 takes a long time to complete. The query is shown as follows: `SELECT ProductNumber, Name, ProductLine FROM Production.Product WHERE ProductNumber = N'` The query plan used by SQL Server for this query is shown in the exhibit.
