Explanation:Please Refer to Explanation below for details:Explanation/Reference:Console into
the SwitchSwitch>enableSwitch#configure terminalSwitch(config)#interface range fa0/1 - 24
Switch(config-if-range)#switchport mode access <<Make all FastEthernet interfaces into access
mode.Switch(config-if-range)#spanning-tree portfast <<Enables the PortFast on interface.Next,

we need to assign FastEthernet ports 0/12 through 0/24 to VLAN 20. By default, all ports on the switch are in VLAN 1. To change the VLAN associated with a port, you need to go to each interface (or a range of interfaces) and tell it which VLAN to be a part of.

```
Switch(config-if-range)#interface range fa0/12 - 24Switch(config-if-range)#switchport access
vlan 20 <<Make these ports members of vlan 20 Switch(config-if-range)#exit Next we need to
make this switch in transparent mode. In this mode, switch doesn't participate in the VTP
domain, but it still forwards VTP advertisements through any configured trunk links.
Switch(config)#vtp mode transparentSwitch(config)#exitSwitch#copy running-config
startup-config
