エンジニアには、そのテーブルのDynamoDBストリームから読み取る3つのAWS Lambda関数があります。Lambda関数は、アイテムのカウント、Amazon Kinesis Data Firehoseへのアイテムの移動、在庫レベルの監視、部品が少ない場合のベンダー注文の作成など、さまざまな機能を実行します。

NEW QUESTION: 3 What is the benefit of performing an unannounced Penetration Testing? **A.** It is best to catch critical infrastructure unpatched. **B.** The tester will have an actual security

posture visibility of the target network.**C.** The tester could not provide an honest analysis.**D.** Network security would be in a "best state" posture.**Answer: B**Explanation:Real life attacks will always come without expectation and they will often arrive in ways that are highly creative and very hard to plan for at all. This is, after all, exactly how hackers continue to succeed against network security systems, despite the billions invested in the data protection industry.A possible solution to this danger is to conduct intermittent "unannounced" penetration tests whose scheduling and occurrence is only known to the hired attackers and upper management staff instead of every security employee, as would be the case with "announced" penetration tests that everyone has planned for in advance. The former may be better at detecting realistic weaknesses.References:
