1. perform daily ETL of data
1.1 validate that yesterday's data model file exists
1.2 validate that today's data model file does not exist
1.3 extract yesterday's data model
1.4 transform the format
1.5 load the transformed data into today's data model file
1.6 exit
Which of the following security concerns is evident in the above pseudocode?
A. Privilege escalation
B. Improper storage of sensitive data
C. Resource exhaustion
D. Time of check/time of use
Answer: D

NEW QUESTION: 4 Which of the following Dockerfile commands cannot be overridden at runtime?
A. VOLUME
B. ADD
C. USER
D. CMD
Answer: B
Explanation: When a developer builds an image from a Dockerfile or when she commits it, the developer can set a number of default parameters that take effect when the image starts up as a container. Four of the Dockerfile commands cannot be overridden at runtime: FROM, MAINTAINER, RUN, and ADD. Everything else has a corresponding override in docker run. We'll go through what the developer might have set in each Dockerfile instruction and how the operator can override that setting.
