NEW QUESTION: 1What can be done to secure the virtual terminal interfaces on a router? (Choose two.)**A.** Enter an access list and apply it to the virtual terminal interfaces using the access-class command.**B.** Administratively shut down the interface.**C.** Create an access list and apply it to the virtual terminal interfaces with the access-group command.**D.** Configure a virtual terminal password and login process.**E.** Physically secure the interface.**Answer: A,D**

Explanation:Explanation/Reference:Explanation:It is a waste to administratively shut down the interface. Moreover, someone can still access the virtual terminal interfaces via other interfaces -> We cannot physically secure a virtual interface because it is "virtual" -> To apply an access list to a virtual terminal interface we must use the "access-class" command. The "access-group" command is only used to apply an access list to a physical interface -> C is not correct. The simplest way to secure the virtual terminal interface is to configure a username & password to prevent unauthorized login.

NEW QUESTION: 2An integration Mute application consumes and processes a list of rows from a CSV file. Each row must be read from the CSV file, validated, and the row data sent to a JMS queue, in the exact order as in the CSV file.If any processing step for a row falls, then a log entry must be written for that row, but processing of other rows must not be affected.What combination of Mute components is most idiomatic (used according to their intended purpose) when Implementing the above requirements?**A.** VM connector first Successful scope On Error Propagate scope**B.** For Each scope On Error Continue scope**C.** Scatter-Gather component On Error Continue scope**D.** Async scope On Error Propagate scope**Answer: B**

NEW QUESTION: 3In addition to data protection, which of the following is a control that is typically used by companies to safeguard the privacy rights of their customers?**I.** End-user computing.**II.** Encryption of data.**III.** Spyware.**IV.** Intrusion detection.**A.** I and III only**B.** II and IV only**C.** II only**D.** I, II, and IV only**Answer: B**

NEW QUESTION: 4Which two operations can be completed in calculation manager? (Choose two.)**A.** View and kill requests**B.** Restructure a planning application**C.** Create planning applications**D.** Delete a reporting application**Answer: A,B**Explanation:Explanation/Reference:Explanation:A: The Sessions window lists active user sessions and requests for the server, application, or database. A user can have more than one session open at any given time. For example, one user may have open sessions on two databases.If you have Administrator or Application Manager permissions, you can end all requests, end all requests for a user, or end a specific request.C: To restructure a database:1. From the System View, click the Database Properties icon.2. In the Enterprise View, expand the Oracle Hyperion Planning application type, the application, and the plan type whose database you want to restructure.3. Right-click the plan type, and select Restructure Database.4. Confirm whether you want to restructure the databaseReferences:Oracle Cloud Designing with Calculation Manager for Oracle Enterprise Performance Management Cloud, page 12-21
