The temp file is called temp01.tmp.A user issues a query on a table on one of the PDBs and receives the following error:ERROR at line 1:ORA-01565: error in identifying file '/u01/app/oracle/oradata/CDB1/temp01.tmp' ORA-27037: unable to obtain file status Identify two ways to rectify the error.**A.** Shut down the database instance and then restart the CDB and PDBs.**B.** Add a new temp file to the temporary tablespace and drop the temp file that that produced the error.**C.** Shut down the database instance, restore the temp01.tmp file from the backup, and then restart the database.**D.** Shutdown the database instance, restore and recover the temp file from the backup, and then open the database with RESETLOGS.**E.** Take the temporary tablespace offline, recover the missing temp file by applying redo logs, and then bring the temporary tablespace online.**Answer: A,B**Explanation:Explanation/Reference: Explanation:* Because temp files cannot be backed up and because no redo is ever generated for them, RMAN never restores or recovers temp files. RMAN does track the names of temp files, but only so that it can automatically re-create them when needed.* If you use RMAN in a Data Guard environment, then RMAN transparently converts primary control files to standby control files and vice versa. RMAN automatically updates file names for data files, online redo logs, standby redo logs, and temp files when you issue RESTORE and RECOVER.
