Besides, if you have any question and doubt about C\_HCMP\_2311, you can consult our service.

**NEW QUESTION: 1**What is needed to verify a digital signature that was created using an RSA algorithm?**A.** private key**B.** both public and private key**C.** trusted third-party certificate**D.** public key**Answer: D****Explanation:**RSA is one of the first practicable public-key cryptosystems and is widely used for secure data transmission. In such a cryptosystem, the encryption key is public and differs from the decryption key which is kept secret. A user of RSA creates and then publishes a public key based on the two large prime numbers, along with an auxiliary value. The prime numbers must be kept secret. Anyone can use the public key to encrypt a message, but with currently published methods, if the public key is large enough, only someone with knowledge of the prime numbers can feasibly decode the message.

**NEW QUESTION: 2****A.** No**B.** Yes**Answer: A****Explanation:**ExplanationReferences:

**NEW QUESTION: 3**展示に示されているトポロジを参照してください。  
すべてのリンクが同じ帯域幅で動作している場合、どのポートがSTP指定ポートになりますか？  
(3つ選択してください。) **A.** スイッチC-Fa0 / 0**B.** スイッチB-Fa0 / 0**C.** スイッチB-Fa0 / 1**D.** スイッチA-Fa0 / 1**E.** スイッチA -Fa0 / 0**F.** スイッチC-Fa0 / 1**Answer: B,C,D****Explanation:**  
ExplanationThis question is to check the spanning tree election problem.1. First, select the root bridge, which can be accomplished by comparing the bridge ID, the smallest will be selected. Bridge-id= bridge priority + MAC address. The three switches in the figure all have the default priority, so we should compare the MAC address, it is easy to find that SwitchB is the root bridge.2. Select the root port on the non-root bridge, which can be completed through comparing root path cost. The smallest will be selected as the root port.3. Next, select the Designated Port. First, compare the path cost, if the costs happen to be the same, then compare the BID, still the smallest will be selected. Each link has a DP. Based on the exhibit above, we can find DP on each link. The DP on the link between SwitchA and SwitchC is SwitchA'Fa0/1, because it has the smallest MAC address.

**NEW QUESTION: 4**What is the primary reason for performing a return on investment analysis?

**A.** To determine the annual rate of loss  
**B.** To decide between multiple vendors  
**C.** To decide is the solution costs less than the risk it is mitigating  
**D.** To determine the current present value of a project  
**Answer: C**
