**NEW QUESTION: 1**You are the Office 365 administrator for your company. The company allows external communications through Microsoft Lync Online for all domains. The call center manager reports that call center personnel are spending too much time chatting with friends and not enough time taking calls. She requests that the call center personnel be blocked from chatting with anyone external to the company by using Lync Online. They still must be able to communicate with internal users. You need to prevent all call center personnel from communicating with external contacts by using Lync Online, while still allowing other employees to communicate with external contacts. What should you do? **A.** In the Lync admin center, remove the Lync Online license from each of the call center personnel. **B.** On the External Communications page of the Lync admin center, turn off external access. **C.** In the Lync admin center, select all call center personnel, edit their external communications settings, and clear the People on Public IM Networks check box. **D.** In the Lync admin center, select all users, edit their external communications settings, and clear the Lync Users check box. **Answer: C**  
Explanation: The question states that "You need to prevent all call center personnel from communicating with external contacts by using Lync Online, while still allowing other employees to communicate with external contacts." Therefore, we need to apply the restriction to the call center personnel only. The question also states that "They still must be able to communicate with internal users." You can turn off external messaging for a single user by clearing the People on Public IM Networks check box. This will override the company setting of allowing external access. The image below shows the People on Public IM Networks check box. To ensure that the call center personnel can continue to be able to communicate with internal users, we need to leave the Lync users checkbox ticked.

**NEW QUESTION: 2**A customer is running a large application on x86 Linux with an Oracle Enterprise database. Which of the following can be used to financially justify migrating the application to POWER8 and DB2? **A.** POWER8 Active Memory Expansion reduces the cost of memory. **B.** POWER8 hardware and software maintenance costs are lower. **C.** POWER8 requires fewer cores to run the same workload. **D.** POWER8 cores exploit SMT6. **Answer: C**  
Explanation: Comparing performance, the 740D 3.6ghz 16 core is rated at 197.7 rPerf (SMT4) whereas the S822 3.89ghz 12 core is rated at 220.1 rPerf (SMT4) or 235.6 rPerf (SMT8). So you can get 11 to 19 percent more performance, more memory, more disk bays and PCIe slots for about 40 percent less cost. Another point to note is that the memory and I/O bandwidth for the POWER8 servers

(scale out and enterprise) is significantly higher than all of the previous architectures. And there are additional follow-on savings for software licensing-for our 740D versus S822, we need four fewer cores on the POWER8, which allows for additional savings on software licensing.
