**NEW QUESTION: 1**You execute the command to recover your database:Which statement is true?**A.** It restores all data files and control files from the most recent backup taken before the "until time", and then recovers up to the "until time" using any restored archive logs that are needed to complete the task.**B.** It restores all data files, redo log files, and control files, and then applies the redo logs up to the specified time.**C.** It restores the control file and all data files from the most recent backups, and then applies the redo logs up to the "until time".**D.** It restores all data files from the specified time, and then applies the redo logs.**Answer: A**  
Explanation:ExplanationUNTIL TIME = 'date\_string' specifies a time as an upper limit. RMAN selects only files that can be used to restore and recover up to but not including the specified time.RMAN can perform recovery of the whole database to a specified past time, SCN, or log sequence number.This type of recovery is sometimes called incomplete recovery because it does not completely use all of the available redo. Incomplete recovery of the whole database is also called database point-in-time recovery (DBPITR).DBPITR requires restoring your database from an older backup, then performing media recovery until your specified target time, SCN or log sequence number. Note that because you need your archived redo log files to perform this process, you cannot perform database point-in-time recovery if you have been running your database in NOARCHIVELOG mode.References:

The recovery model and backup schedule are configured as shown in the following table: At 14:00 hours, you discover that pages 71, 520, and 713 on one of the database files are corrupted on the reporting database. You need to ensure that the databases are restored. You also need to ensure that data loss is minimal. What should you do? **A.** Restore the latest full backup. **B.** Perform a partial restore. **C.** Restore the latest full backup, and restore the latest differential backup. Then, restore each log backup taken before the time of failure from the most recent differential backup. **D.** Restore the latest full backup. Then, restore each differential backup taken before the time of failure from the most recent full backup. **G.** Perform a point-in-time restore. **H.** Restore the latest full backup, and restore the latest differential backup. Then, restore the latest log backup. **Answer: D** Explanation: File restore Restores a file or filegroup in a multi-filegroup database. Note that under the simple recovery model, the file must belong to a read-only filegroup. After a full file restore, a differential file backup can be restored. Page restore Restores individual pages. Page restore is available only under the full and bulk-logged recovery models. Piecemeal restore Restores the database in stages, beginning with the primary filegroup and one or more secondary filegroups. A piecemeal restore begins with a RESTORE DATABASE using the PARTIAL option and specifying one or more secondary filegroups to be restored
