Professionals such as sales operations managers, customer **D-PDM-A-01 Current Exam Content** service managers, service schedulers, administrators, office managers, executives, partners, and consultants, who want to demonstrate a foundational understanding of the application functionality, are seeking for the Dell D-PDM-A-01 exam.

Estruturit offer you all the Q&A of the D-PDM-A-01 real test , Exams are closed book and no reference materials are allowed, The high quality and accurate D-PDM-A-01 valid questions & answers are the guarantee of your success.

If you fail the exam with D-PDM-A-01 exam bootcamp unfortunately, all refund will be return as compensation to your loss.

NEW QUESTION: 1 Amazon EC2 문제의 경우 AWS CloudFormation 문제를 해결하는 동안 자세한 내용을 보려면 cloud-init 및 cfn 로그를 확인해야 합니다. 이러한 로그가 게시되는 디렉토리를 식별하십시오.

A. / var / opt / log / ec2 **B.** / var / log / **C.** / var / log / ec2 **D.** / var / log / lastlog **Answer: B**

Explanation: When you use AWS CloudFormation, you might encounter issues when you create, update, or delete AWS CloudFormation stacks. For Amazon EC2 issues, view the cloud-init and cfn logs. These logs are published on the Amazon EC2 instance in the /var/log/ directory. These logs capture processes and command outputs while AWS CloudFormation is setting up your instance. For Windows, view the EC2Configure service and cfn logs in %ProgramFiles%AmazonEC2ConfigService and C:cfnlog. You can also configure your AWS CloudFormation template so that the logs are published to Amazon CloudWatch, which displays logs in the AWS Management Console so you don't have to connect to your Amazon EC2 instance.

NEW QUESTION: 2

TOGAF 빌딩 블록에 대한 다음 설명의うち、正しくないものはどれですか。 **A.**

他のエンタープライズアーキテクチャプロジェクトで再利用しないでください **B.**

境界を定義しました **C.**

他のビルディングブロックが相互運用できるようにする安定した公開インターフェースが必要です

D. 組織全体のビジネスニーズを満たすことを目的とした機能のパッケージです。 **Answer: A**

NEW QUESTION: 3 for which activity do you use the key figure matrix? Please choose the

correct answer. **A.** Allocation project resources. **B.** Structure the information from the

requirement analysis **C.** List properties of the data source **D.** Provide information on the

relations between characteristics **Answer: D**

NEW QUESTION: 4 A company has an Amazon EC2 deployment that has the following

architecture: * An application tier that contains 8 m4.xlarge instances * A Classic Load Balancer * Amazon S3 as a persistent data store

After one of the EC2 instances fails, users report very slow processing of their requests. A Solutions Architect must recommend design changes to

maximize system reliability. The solution must minimize costs. What should the Solution

Architect recommend? **A.** Migrate the existing EC2 instances to a serverless deployment using

AWS Lambda functions **B.** Replace the application tier with 4 m4.2xlarge instances **C.** Replace

the application tier with m4.large instances in an Auto Scaling group **D.** Change the Classic Load

Balancer to an Application Load Balancer **Answer: D** **Explanation:** Explanation

By default, connection draining is enabled for Application Load Balancers but must be enabled for Classic

Load Balancers. When Connection Draining is enabled and configured, the process of

deregistering an instance from an Elastic Load Balancer gains an additional step. For the

duration of the configured timeout, the load balancer will allow existing, in-flight requests made to an instance to complete, but it will not send any new requests to the instance. During this time, the API will report the status of the instance as InService, along with a message stating that "Instance deregistration currently in progress." Once the timeout is reached, any remaining connections will be forcibly closed.
