**NEW QUESTION: 3**You are developing a SQL Server Integration Services (SSIS) project that contains a project Connection Manager and multiple packages. All packages in the project must connect to the same database. The server name for the database must be set by using a parameter named ParamConnection when any package in the project is executed. You need to develop this project with the least amount of development effort. What should you do? (Each answer presents a part of the solution. Choose all that apply.)  
**A.** Edit the project Connection Manager in Solution Explorer. Set the ConnectionName property to @ [\$Project::ParamConnection].  
**B.** Edit each package Connection Manager. Set the ConnectionName property to @ [\$Project::ParamConnection].  
**C.** Create a package parameter named ConnectionName in each package.  
**D.** Set the Required property of the parameter to True.  
**E.** Create a project parameter named ConnectionName.  
**F.** Set the Sensitive property of the parameter to True.  
**Answer: A,D,E**  
Explanation: C: From question server name for the database must be set by using a parameter named ParamConnection when any package in the project is executed." E: SSIS 2012 has introduced the concept of Project level connection managers. An SSIS project is generally more than one package. To simplify lives, the SSIS team now allows for the sharing of common resources across projects, connection managers being one of those resources. F: When a parameter is marked as required, a server value or execution value must be specified for that parameter. Otherwise, the corresponding package does not execute. Although the parameter has a default value at design time, it will never be used once

the project is deployed. Note: \* Integration Services (SSIS) parameters allow you to assign values to properties within packages at the time of package execution. You can create project parameters at the project level and package parameters at the package level. Project parameters are used to supply any external input the project receives to one or more packages in the project. Package parameters allow you to modify package execution without having to edit and redeploy the package. Reference: Integration Services (SSIS) Parameters

VPC 피어링 연결을 사용하면 사실 IP 주소를 사용하는 피어 VPC간에 동일한 네트워크의 일부인 것처럼 트래픽을 라우팅 할 수 있습니다. 동일한 또는 다른 AWS 계정의 한 VPC가 다른 VPC의 리소스와 연결하려고 할 때 유용합니다. <http://docs.aws.amazon.com/AmazonVPC/latest/PeeringGuide/peering-configurations-full-access.html#tthreevpcs-full-access>
