**Answer: A,B**Explanation:Explanation/Reference:Explanation:Conditional Expressions for Permission Entries Windows Server 2008 R2 and Windows 7 enhanced Windows security descriptors by introducing a conditional access permission entry. Windows Server 2012 R2 takes advantage of conditional access permission entries by inserting user claims, device claims, and resource properties, into conditional expressions. Windows Server 2012 R2 security evaluates these expressions and allows or denies access based on results of the evaluation. Securing access to resources through claims is known as claims-based access control. Claims-based access control works with traditional access control to provide an additional layer of authorization that is flexible to the varying needs of the enterprise environment.
