**NEW QUESTION: 2** **HOTSPOT** You have a server named Server1 that has the Web Server (IIS) server role installed. You obtain a Web Server certificate. You need to configure a website on Server1 to use Secure Sockets Layer (SSL). To which store should you import the certificate? To answer, select the appropriate store in the answer area. **Hot Area:** **Answer:** Explanation: Explanation/Reference: Explanation: When you enable secure communications (SSL and TLS) on an Internet Information Services (IIS) computer, you must first obtain a server certificate. If it is a Self-Signed certificate, it only can be used on the local server machine. If it is a public certificate, you'll need to download the CA root certificate of the certificate and install the CA root certificate into the Trusted Root Certificate Authorities store. Root certificates provide a level of trust that certificates that are lower in the hierarchy can inherit. Each certificate is inspected for a parent certificate until the search reaches the root certificate. For more information about certificate, please refer to: References:
