Instead update the web.config file to include the applicationInitialization configuration element. Specify custom initialization actions to run the scripts.Note: Some apps might require custom warm-up actions before the swap. The applicationInitialization configuration element in web.config lets you specify custom initialization actions. The swap operation waits for this custom warm-up to finish before swapping with the target slot. Here's a sample web.config fragment.<system.webServer><applicationInitialization><add initializationPage="/" hostName="[app hostname]" /><add initializationPage="/Home/About" hostName="[app hostname]" /></applicationInitialization></system.webServer>Reference:
