A. Profit margin, acid-test ratio, and return on assets.
B. Inventory turnover ratio, times interest earned, and debt-to-equity ratio.
C. Acid-test ratio, inventory turnover ratio, and average collection period ratio
D. Acid-test ratio, current ratio, and return on equity.
Answer: C
Explanation: Working capital equals current assets minus current liabilities. The acid-test ratio equals quick assets (current assets - inventory - prepaid expenses) divided by current liabilities. Inventory turnover equals cost of goods sold divided by average inventory. The average collection period (number of days' sales in accounts receivable, a current asset) equals the number of days in a year divided by the accounts receivable turnover (net credit sales / average receivables). The foregoing are some of the many ratios that can be used to evaluate working capital management.
