**NEW QUESTION: 1** A systems security engineer is assisting an organization's market survey team in reviewing requirements for an upcoming acquisition of mobile devices. The engineer expresses concerns to the survey team about a particular class of devices that uses a separate SoC for baseband radio I/O. For which of the following reasons is the engineer concerned?  
**A.** These devices can communicate over networks older than HSPA+ and LTE standards, exposing device communications to poor encryption routines  
**B.** The associated firmware is more likely to remain out of date and potentially vulnerable  
**C.** The manufacturers of the baseband radios are unable to enforce mandatory access controls within their driver set  
**D.** The organization will be unable to restrict the use of NFC, electromagnetic induction, and Bluetooth technologies  
**Answer: D**

**NEW QUESTION: 2** `svcs -d svc:/network/ssh:default`  
**A.** Option D  
**B.** Option B  
**C.** Option A  
**D.** Option C  
**Answer: B**  
Explanation: The `svcs` command displays information about service instances as recorded in the service configuration repository. `-d` Lists the services or service instances upon which the given service instances depend.

**NEW QUESTION: 3** BBB is a publisher. As a consequence of BBB using the Internet to outsource its typesetting and studio activities it has been able to move its few remaining staff into much smaller and less expensive office accommodation. Which activity in Porter's Value Chain has benefitted from BBB's use of information systems?  
**A.** Infrastructure  
**B.** Outbound logistics  
**C.** HR management  
**D.** Sales and marketing  
**Answer: A**

**NEW QUESTION: 4** You are creating an application that manages information about your company's products. The application includes a class named `Product` and a method named `Save`. The `Save()` method must be strongly typed. It must allow only types inherited from the `Product` class that use a constructor that accepts no parameters. You need to implement the `Save()` method. Which code segment should you use?  
**A.** `public static void Save<T>(T target) where T: Product, new() {...}`  
**B.** `public static void Save<T>(T target) where T: Product {...}`  
**C.** `public static void Save<T>(T target) where T: new(), Product {...}`  
**D.** `public static void Save(Product target) {...}`  
**Answer: A**  
Explanation: When you define a generic class, you can apply restrictions to the kinds of types that client code can use for type arguments when it instantiates your class. If client code tries to instantiate your class by using a type that is not allowed by a constraint, the result is a compile-time error. These restrictions are called constraints. Constraints are specified by using the `where` contextual keyword.
