Note: * The contents of ASM files are stored in a disk group as a set, or collection, of data extents that are stored on individual disks within disk groups. Each extent resides on an individual disk. Extents consist of one or more allocation units (AU). To accommodate increasingly larger files, ASM uses variable size extents. * The size of the extent map that defines a file can be smaller by a factor of 8 and 64 depending on the filesize.
