NEW QUESTION: 1Which type of drive would be the most cost effective for tier 3 level data?**A.** SCSIB. SSDC. Nearline SASD. Fibre Channel**Answer: C**

NEW QUESTION: 2Ferris Plastics, Inc. is a medium sized company, with an enterprise network (access, distribution and core switches) that provides LAN connectivity from user PCs to corporate servers. The distribution switches are configured to use HSRP to provide a high availability solution.* DSW1 -primary device for VLAN 101 VLAN 102 and VLAN 105* DSW2 - primary device for VLAN 103 and VLAN 104* A failure of GigabitEthernet1/0/1 on primary device should cause the primary device to release its status as the primary device, unless GigabitEthernet1/0/1 on backup device has also failed.Troubleshooting has identified several issues. Currently all interfaces are up. Using the running configurations and show commands, you have been asked to investigate and respond to the following question.During routine maintenance, it became necessary to shut down the GigabitEthernet1/0/1 interface on DSW1. All other interfaces were up. During this time, DSW1 remained the active device for the VLAN 102 HSRP group. You have determined that there is an issue with the decrement value in the track command for the VLAN 102 HSRP group. What needs to be done to make the group function properly?**A.** The decrement value on DSWS should be greater than 195 and less than 205.**B.** The decrement value on DSW1 should be greater than 11 and less than 19.**C.** The decrement value on DSW1 should be greater than 5 and less than 15. **0D.** The decrement value on DSW1 should be greater than 9 and less than 15.**E.** The decrement value on DSWS should be greater than 190 and less than 200.**Answer: B**Explanation:Explanation: The question clearly stated that there was an issue with the decrement value in VLAN 102 so we should check VLAN 102 on both DSW1 and DSW2 switches first. Click on the PC Console1 and PC Console2 to access these switches then use the "show running-config" command on both switches DSW1>enable DSW1#show running-config DSW2>enableDSW2#show running-configAs shown in the outputs, the DSW1's priority is 200 and is higher than that of DSW2 so DSW1 becomes active switch for the group. Notice that the interface Gig1/0/1 on DSW1 is being tracked so when this interface goes down, HSRP automatically reduces the router's priority by a configurable amount, in this case 5. Therefore the priority of DSW1 goes down from 200 to 195. But this value is still higher than that of DSW2 (190) so DSW1 remains the active switch for the group. To make DSW2 takes over this role, we have to configure DSW1's decrement value with a value equal or greater than 11 so that its result is smaller than that of DSW2 (200 - 11 < 190). Therefore C is the correct answer.

NEW QUESTION: 3You have a Nano Server that has one network interface. The server is configured to obtain an IP address automatically.You need to configure the server to have the following IP configurations:* IP address 172.16.3.100* Default gateway: 172.163.1* Subnet mask: 255.255.255.0What command should you run? To answer, select the appropriate options in the answer area.**Answer:** Explanation:ExplanationReferences:
