Plan sponsors, consultants and software vendors cannot claim compliance with the PPS; they can only endorse or require their clients to be in compliance.**A.** III only**B.** I only**C.** II and III only**D.** I, II and III**Answer: A****Explanation:** Explanation/Reference:Explanation:The PPS are an adjunct to the AIMR Code of Ethics and Standards of Professional Conduct and not explicitly incorporated in that framework. Compliance with PPS is voluntary, not required.

**NEW QUESTION: 3A.** Option DB. Option CC. Option ED. Option AE. Option BF. Option F

**Answer: A,D,E****Explanation:**

[http://www.cisco.com/en/US/tech/tk389/tk621/technologies\\_white\\_paper09186a0080094cfa.shtml](http://www.cisco.com/en/US/tech/tk389/tk621/technologies_white_paper09186a0080094cfa.shtml)ConvergenceCisco enhanced the original 802.1D specification with features such as Uplink Fast,Backbone Fast, and Port Fast to speed up the convergence time of a bridged network. Thedrawback is that these mechanisms are proprietary and need additional configuration.Alternate and Backup Port RolesThese two port roles correspond to the blocking state of 802.1D. A blocked port is definedas not being the designated or root port. A blocked port receives a more useful BPDU thanthe one it sends out on its segment.Remember that a port absolutely needs to receive BPDUs in order to stay blocked. RSTPintroduces these two roles for this purpose.Rapid Transition to Forwarding State Rapid transition is the most important feature introduced by 802.1w. The legacy STA passively waited for the network to converge before it turned a port into the forwarding state. The achievement of faster convergence was a matter of tuning the conservative default parameters (forward delay and max\_age timers) and often put the stability of the network at stake. The new rapid STP is able

to actively confirm that a port can safely transition to the forwarding state without having to rely on any timer configuration. There is now a real feedback mechanism that takes place between RSTP-compliant bridges. In order to achieve fast convergence on a port, the protocol relies upon two new variables: edge ports and link type.
