NEW QUESTION: 1You add a Windows Server 2008 R2 server with the Hyper-V role installed to an existing Hyper-V failovercluster.After you move a virtual machine (VM) to the new cluster node, Microsoft System Center Virtual MachineManager (VMM) 2008 R2 reports the status of the VM as Unsupported Cluster Configuration.You need to be able to manage the VM by using VMM. What should you do?**A.** Move the VM configuration file to a local storage device, and update the pointer to the file.**B.** Disable TCP Chimney Offload on the new cluster nodes network adapters **C.** Disable the TCP/IP Offload Engine (TOE) on the new cluster nodes network adapters.**D.**

Update the virtual networking configuration of the new cluster node to match the virtual networking configuration of the original cluster nodes.**Answer: D**Explanation: Explanation/Reference:One or more virtual network adapters on the virtual machine are not connected to a highly available virtualnetwork.If the virtual networks on all hosts in the host cluster do not have the same name and the same case (virtualnetwork names are case-sensitive), a highly available virtual machine might lose connectivity when it ismigrated or fails over to another cluster node. To find out the common virtual networks for the cluster, in theVMM Administrator Console, view the Networks tab in the host cluster properties. To configure virtualnetworks on the hosts, use the Networking tab in host properties.For a VN to be marked as HA, The location and tag of the VN in all nodes must be the same. For each VNin the cluster:The NICs to which the VN is attached in each node have the same locationThe Tag in the VN in each node is the sameThe VN Name is the sameAfter you commit changes, refresh the cluster so ensure that the VN is detected as HA.To check that the VNs are properly detected as HA:In the admin console, select the cluster, right click and select propertiesGo to the Virtual Networks and check that the VNs are displayed.If a VN is not displayed, it means that location, tag or name is not consistent across the cluster nodesLastly, if the VM has a DVD image attached, ensure that the .iso file resides in the shared storage and notin a local volume of the Host.Go to the VM properties and in the hardware tab select the DVD driver.Check the path to the .iso file points to a share resource.On Windows Server 2008 R2 the difference between Balanced and High Performance is minimal:Balanced Settings (default):-Hard disk --> Turn off hard disk after --> 0 minutes-Sleep --> Allow wake timers --> Enable-USB settings --> USB selective suspend setting --> Enabled-Power buttons and lid --> Power button action --> Shut down-PCI Express --> Link State Power Management --> --> Moderate power savings-Processor power management - System cooling policy --> Active-Display --> Turn off display after --> 10 MinutesHigh Performance :-Hard disk --> Turn off hard disk after --> 0 minutes-Sleep --> Allow wake timers --> Enable-USB settings --> USB selective suspend setting --> Enabled-Power

buttons and lid --> Power button action --> Shut down-PCI Express --> Link State Power Management --> --> Off-Processor power management - System cooling policy --> Active -Display --> Turn off display after --> 15 Minutes
Note: Differences indicated in bold.If Hyper-V switch driver installation has gone corrupt.You could either:
1.Remove/re-add the Hyper-V role
2.Uninstall and re-install the switch driver (instructions below)
For 2:1.Close Hyper-V manager
2.close ncpa.cpl
3."net stop nvspwmi" (from an elevated prompt)
4."netcfg.exe -u VMS_PP" (from an elevated prompt)
5."netcfg.exe -c p -i VMS_PP" (from an elevated prompt)
6.Reboot
In case Switch driver installation issue is still suspected then check the setupapi logs.
1.Change HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion\Setup\LogLevel to 0x2000ffff
2.Reboot
3.Try it again
4.check windowsinfsetupapi.app.log and windowsinfsetupapi.dev.log

NEW QUESTION: 2은행의 내부 감사는 여러 회귀 모델을 개발했습니다. 상업 대출에서 이자 소득 금액을 추정하기 위해 여러 기어에 사용됩니다. 현재 연도 동안, 감사인은 모델을 적용하고 r^2 값이 급격히 감소한 것을 발견했지만 그렇지 않으면 모델이 제대로 작동하는 것 같습니다. 다음 결론 중 어떤 것이 변화에 의해 정당화됩니까?
A. 회귀 분석은 더 이상 이자 소득을 추정하기에 적합한 기술이 아닙니다.
B. 단면 회귀 분석으로 변경하면 r 가 증가해야 합니다.
C. 모델에 포함되지 않은 일부 새로운 요소로 인해 이자 소득이 변경됩니다.
D. 선형 회귀 분석은 모델의 신뢰성을 높입니다.
Answer: C
Explanation: The coefficient of determination (r^2) is the amount of variation in the dependent variable (interest income) that is explained by the independent variables. In this case, less of the change in interest income is explained by the model. Thus, some other factor must be causing interest income to change. This change merits audit investigation. In preparing the annual profit plan for the coming year, Wilkens Company wants to determine the cost behavior pattern of the maintenance costs. Wilkens has decided to use linear regression by employing the equation $y = a + bx$ for maintenance costs. The prior year's data regarding maintenance hours and costs, and the results of the regression analysis, are given below and in the opposite column.
