NEW QUESTION: 1 Which statement is true regarding UDLD and STP timers?
A. The timers need to be synchronized by using the spanning-tree uddld-sync command.
B. The UDLD message timer should be two times the STP forward delay to prevent loops.
C. UDLD and STP are unrelated features, and there is no relation between the timers.
D. The timers should be set in such a way that UDLD is detected before the STP forward delay expires.
Answer: D
Explanation: UDLD is designed to be a helper for STP. Therefore, UDLD should be able to detect an unidirectional link before STP would unblock the port due to missed BPDUs. Thus, when you configure UDLD timers, make sure your values are set so that unidirectional link is detected before "STP MaxAge + 2xForwardDelay" expires.
