Answer: B

NEW QUESTION: 2Response:**A.** hdbnsutil**B.** hdbparam**C.** hdbinst**D.** hdblcm**Answer: D**

NEW QUESTION: 3次のうち、Amazon CloudWatchに当てはまるものはどれですか？**A.** Amazon CloudWatchは、企業が低遅延で高速のデータ転送速度でコンテンツを配信する簡単で費用対効果の高い方法を提供するウェブサービスです。**B.** Amazon CloudWatchは、AWSでリアルタイムに実行されるAmazon Web Services (AWS) リソースとアプリケーションを監視します。**C.** これらのいずれも当てはまりません。**D.** Amazon CloudWatchは、サーバーをプロビジョニングまたは管理せずにコードを実行します。**Answer: B**
Explanation: Amazon CloudWatch monitors your Amazon Web Services (AWS) resources and the applications you run on AWS in real-time. You can use CloudWatch to collect and track metrics, which are variables you can measure for your resources and applications. CloudWatch alarms send notifications or automatically make changes to the resources you are monitoring based on rules that you define. For example, you can monitor the CPU usage and disk reads and writes of your Amazon EC2 instances and then use this data to determine whether you should launch additional instances to handle increased load. You can also use this data to stop under-used instances to save money. In addition to monitoring the built-in metrics that come with AWS, you can monitor your own custom metrics. With CloudWatch, you gain system-wide visibility into resource utilization, application performance, and operational health.
