NEW QUESTION: 1You are developing a Microsoft Dynamics AX 2012 class. You need to add messages to the infolog. Which of the following code segments can you use? (Choose all that apply.)**A.** `box::info("This is a message.");`**B.** `print "This is a message.";`**C.** `error("This is a message.");`**D.** `info("This is a message.");`**E.** `pause;`**Answer: C,D**

NEW QUESTION: 2If the SPI and CPI are both above 1, then the project is:**A.** Ahead of schedule and over budget.**B.** Behind schedule and under budget.**C.** Ahead of schedule and under budget.**D.** Behind schedule and over budget.**Answer: C**

NEW QUESTION: 3Your network contains an Active Directory domain. All servers run Windows Server 2008 R2 and are members of the domain. All servers are located in the main office. You have a portable computer named Computer1 that runs Windows 7. Computer1 is joined to the domain and is located in a branch office. A file server named Server1 contains a shared folder named Share1. You need to configure Computer1 to meet the following requirements:
-Minimize network traffic between the main office and the branch office
-Ensure that Computer1 can only access resources in Share1 while it is connected to the network. What should you do?**A.** On Server1, configure Share1 to be available offline.**B.** On Computer1, enable transparent caching.**C.** On Server1, configure DirectAccess.**D.** On Computer1, enable offline files.**Answer: B****Explanation:** Transparent Caching When you enable transparent caching, Windows 7 keeps a cached copy of all files that a user opens from shared folders on the local volume. The first time a user opens the file, the file is stored in the local cache. When the user opens the file again, Windows 7 checks the file to ensure that the cached copy is up to date and if it is, opens that instead. If the copy is not up to date, the client opens the copy hosted on the shared folder, also placing it in the local cache. Using a locally cached copy speeds up access to files stored on file servers on remote networks from the client. When a user changes a file, the client writes the changes to the copy of the file stored on the shared folder. When the shared folder is unavailable, the transparently cached copy is also unavailable. Transparent caching does not attempt to keep the local copy synced with the copy of the file on the remote file server as the Offline Files feature does. Transparent caching works on all files in a shared folder, not just those that you have configured to be available offline.

NEW QUESTION: 4Your customer has asked you to come in and verify the operation of routers R1 and R2 which are configured to use HSRP. They have questions about how these two devices will perform in the event of a device failure. What percentage of the outgoing traffic from the 172.16.10.0/24 subnet is being forwarded through R1?**A.** R2-100%**B.** R1-50 %, R2-50%**C.** R1-0%**D.** R1-100%**Answer: D****Explanation:** Based on the following output, we see that R1 is the active standby router for the Ethernet 0/0 link, so all outgoing traffic will be forwarded to R1.
