NEW QUESTION: 1 Which statement describes SNMP functionality in Cisco NX-OS Software?
A. SNMP must be enabled with the feature snmp command before any SNMP configuration is possible.
B. NX-OS Software supports one instance of SNMP globally for all VDCs; however, MIB counters are collected and reported individually per VDC.
C. SNMP always uses the default VRF on the Cisco Nexus 7000 Series Switches.
D. NX-OS Software supports 3DES and AES for SNMPv3 message encryption.
E. SNMP is always enabled by default in NX-OS Software and cannot be disabled.
Answer: D
Explanation: Layer 3 interfaces support Virtual Routing and Forwarding instances (VRFs). VRFs exist within virtual device contexts (VDCs). By default, Cisco NX-OS places you in the default VDC and default VRF unless you specifically configure another VDC and VRF. A Layer 3 logical interface (VLAN interface, loopback) configured in one VDC is isolated from a Layer 3 logical interface with the same number configured in another VDC. For example, loopback 0 in VDC 1 is independent of loopback 0 in VDC 2
