NEW QUESTION: 1How long can a category name be?**A.** 128 characters**B.** 256 characters**C.** 1024 characters**D.** 64 characters**Answer: B**

NEW QUESTION: 2A map has been designed to append to an audit log when a validation error occurs. The map is being run using the Command Server. At runtime, the map intermittently fails. After some investigation, it is determined that the same map is being called by a RUN function in another map. Which of the following options MAY reduce the number of map failures?**A.** Enable a Card Retry on the input cards.**B.** Modify the map settings to specify a custom file name for the audit log.**C.** Change the Map Audit Action setting from "Append" to "Create".**D.** Enable a Map Retry.**Answer: D**

NEW QUESTION: 3Refer to the exhibit.What is the meaning of the term dynamic as displayed in the output of the show frame-relay map command shown?**A.** The Serial0/0 interface acquired the IP address of 172.16.3.1 from a DHCP server.**B.** The mapping between DLCI 100 and the end station IP address 172.16.3.1 was learned through Inverse ARP.**C.** The Serial0/0 interface is passing traffic.**D.** The DLCI 100 will be dynamically changed as required to adapt to changes in the Frame Relay cloud.**E.** The DLCI 100 was dynamically allocated by the router.**Answer: B**
Explanation:Inverse Address Resolution Protocol (Inverse ARP) was developed to provide a mechanism for dynamic DLCI to Layer 3 address maps. Inverse ARP works much the same way Address Resolution Protocol (ARP) works on a LAN. However, with ARP, the device knows the Layer 3 IP address and needs to know the remote data link MAC address. With Inverse ARP, the router knows the Layer 2 address which is the DLCI, but needs to know the remote Layer 3 IP address.When using dynamic address mapping, Inverse ARP requests a next-hop protocol address for each active PVC. Once the requesting router receives an Inverse ARP response, it updates its DLCI-to-Layer 3 address mapping table. Dynamic address mapping is enabled by default for all protocols enabled on a physical interface. If the Frame Relay environment supports LMI autosensing and Inverse ARP, dynamic address mapping takes place automatically. Therefore, no static address mapping is required.
