Etc.**C:** If you are using Secure Sockets Layer (SSL), you must either create an SSL certificate or add the new domain to your existing SSL certificate.*Create an SSL

certificate if you are using a different root domain (for example, ContosoApps.com). *Add the new app domain to an existing SSL certificate if you are using the same root domain (for example, Apps.Contoso.com). Either way, the domain should be added in the form of a wildcard (for example, *.contosoapps.com). You need a wildcard certificate instead of individual certificates because each installed app has its own subdomain. Note: *Wildcard DNS should point to the load balancer.
