NEW QUESTION: 3What can be done to secure the virtual terminal interfaces on a router? (Choose two.)**A.** Administratively shut down the interface.**B.** Configure a virtual terminal password and login process.**C.** Physically secure the interface.**D.** Create an access list and apply it to the virtual terminal interfaces with the access-group command.**E.** Enter an access list and apply it to the virtual terminal interfaces using the access-class command.**Answer: B,E**
Explanation:Explanation/Reference:Explanation:It is a waste to administratively shut down the

interface. Moreover, someone can still access the virtual terminal interfaces via other interfaces -> We cannot physically secure a virtual interface because it is "virtual" -> To apply an access list to a virtual terminal interface we must use the "access-class" command. The "access-group" command is only used to apply an access list to a physical interface -> C is not correct. The most simple way to secure the virtual terminal interface is to configure a username & password to prevent unauthorized login.
