The Best formula to get a marvelous success in Paloalto Certifications and Accreditations PCNSC Exam, There are three formats of the Palo Alto Networks Certified Network Security Consultant exam dumps for your preparation.

**NEW QUESTION: 1** Refer to the exhibit. Which two statements are true about the loopback address that is configured on RouterB? (Choose two.)  
**A.** It indicates that RouterB should be elected the DR for the LAN.  
**B.** It provides stability for the OSPF process on RouterB.  
**C.** It ensures that data will be forwarded by RouterB.  
**D.** It decreases the metric for routes that are advertised from RouterB.  
**E.** It specifies that the router ID for RouterB should be 10.0.0.1.  
**Answer: B,E**  
Explanation: Explanation/Reference: A loopback interface never comes down even if the link is broken so it provides stability for the OSPF process (for example we use that loopback interface as the router-id) - The router-ID is chosen in the order below:  
+ The highest IP address assigned to a loopback (logical) interface.  
+ If a loopback interface is not defined, the highest IP address of all active router's physical interfaces will be chosen. -> The loopback interface will be chosen as the router ID of RouterB -Topic 9, Simulation

**NEW QUESTION: 2** A remote user tries to login to a secure network using Telnet, but accidentally types in an invalid user name or password. Which responses would NOT be preferred by an experienced Security Manager? (multiple answer)  
**A.** Invalid Username  
**B.** Authentication Failure  
**C.** Access Denied  
**D.** Invalid Password  
**E.** Login Attempt Failed  
**Answer: A,D**  
Explanation: As little information as possible should be given about a failed login attempt. Invalid username or password is not desirable.

**NEW QUESTION: 3** A user has launched an RDS PostgreSQL DB with AWS. The user did not specify the maintenance window during creation. The user has configured RDS to update the DB instance type from micro to large. If the user wants to have it during the maintenance window, what will AWS do?  
**A.** It is not possible to change the DB size from micro to large with RDS  
**B.** AWS will not allow to update the DB until the maintenance window is configured  
**C.** AWS will ask the user to specify the maintenance window during the update  
**D.** AWS will select the default maintenance window if the user has not provided it  
**Answer: D**  
Explanation: AWS RDS has a compulsory maintenance window which by default is 30 minutes. If the user does not specify the maintenance window during the creation of RDS then AWS will select a 30-minute maintenance window randomly from an 8-hour block of time per region. In this case, Amazon RDS assigns a 30-minute maintenance window on a randomly selected day of the week.
