NEW QUESTION: 1 On Cisco ASA Software Version 8.4.1 and later, which three EtherChannel modes are supported? (Choose three.)
A. auto mode, which automatically responds to either PAgP or LACP negotiation from the peer
B. on mode, which enables static port-channel mode
C. passive mode, which responds to LACP negotiation from the peer
D. off mode, which disables dynamic negotiation
E. active mode, which initiates LACP negotiation
Answer: B,C,E

Explanation:

http://www.cisco.com/en/US/docs/security/asa/asa84/configuration/guide/interface_start.html#wp1_329030 Link Aggregation Control Protocol
The Link Aggregation Control Protocol (LACP) aggregates interfaces by exchanging the Link Aggregation Control Protocol Data Units (LACPDUs) between two network devices. You can configure each physical interface in an EtherChannel to be:
Active-Sends and receives LACP updates. An active EtherChannel can establish connectivity with either an active or a passive EtherChannel. You should use the active mode unless you need to minimize the amount of LACP traffic.
Passive-Receives LACP updates. A passive EtherChannel can only establish connectivity with an active EtherChannel.
On-The EtherChannel is always on, and LACP is not used. An "on" EtherChannel can only establish a connection with another "on" EtherChannel. LACP coordinates the automatic addition and deletion of links to the EtherChannel without user intervention. It also handles misconfigurations and checks that both ends of member interfaces are connected to the correct channel group. "On" mode cannot use standby interfaces in the channel group when an interface goes down, and the connectivity and configurations are not checked.

NEW QUESTION: 2 An administrator needs to upgrade a Veritas Enterprise Vault 11.0 server installed on a Windows Server 2008 R2 platform to Veritas Enterprise Vault 12.x. Which initial steps are required to upgrade the environment?
A. upgrade to Veritas Enterprise Vault 11.0.1 first, then use the Server Settings Migration Wizard
B. run EVSVR, then run the Veritas Enterprise Vault 12.x installer
C. use the Server Settings Migration Wizard
D. upgrade to Veritas Enterprise Vault 11.0.1 first, then run the Veritas Enterprise Vault 12.x installer
Answer: D

NEW QUESTION: 3 The BEST method for assessing the effectiveness of a business continuity plan is to review the:
A. emergency procedures and employee training.
B. results from previous tests.
C. plans and compare them to appropriate standards.
D. offsite storage and environmental controls.
Answer: B
Explanation: Previous test results will provide evidence of

the effectiveness of the business continuity plan. Comparisons to standards will give some assurance that the plan addresses the critical aspects of a business continuity plan but will not reveal anything about its effectiveness. Reviewing emergency procedures, offsite storage and environmental controls would provide insight into some aspects of the plan but would fall short of providing assurance of the plan's overall effectiveness.

NEW QUESTION: 4 Refer to the exhibit. Given the output for this command, if the router ID has not been manually set, what router ID will OSPF use for this router?
A. 10.154.154.1
B. 172.16.5.1
C. 10.1.1.2
D. 192.168.5.3
Answer: B
Explanation: CCNA Tutorial: The OSPF Router ID (RID)
<http://www.thebryantadvantage.com/CCNACertificationExamTutorialOSPFRouterIDRID.htm>
When determining the Router ID (RID) of an OSPF-enabled router, OSPF will always use the numerically highest IP address on the router's loopback interfaces, regardless of whether that loopback is OSPF-enabled. What if there is no loopback? OSPF will then use the numerically highest IP address of the physical interfaces, regardless of whether that interface is OSPF-enabled.
