**NEW QUESTION: 1** You want to deploy oracle Solaris 11 with the automated installer (AI). You need to make sure that your server and network meet the requirements for using AI. Choose the three options that describe the requirements for using AI. **A.** The install server can be either an x86 machine or a SPARC machine. **B.** If two client machines have different architectures and need to be installed with different versions of the Oracle Solaris 11 OS, then create two AI manifests and two install services. **C.** The install server needs to be able to access an Oracle Solaris Image Packaging System (IPS) software package repository; the clients do not. **D.** You need a separate install service for each different client architecture that you plan to install, and for each different version of the Oracle Solaris 11 OS that you plan to install on client systems. **E.** You can create only one manifest per install service. If you need more than one manifest, create multiple install services. **F.** If two client machines have different architectures and need to be installed with the same version of the Oracle Solaris 11 OS, then create two AI manifests and a single Install service. **Answer: A,C,F** Explanation: **B:** Note: You can create custom AI manifests for particular clients. Create a custom XML AI manifest file. This method is best suited to an environment where few systems require custom provisioning. Most systems to be installed have identical or similar hardware and will be provisioned identically. Write a script that dynamically creates an AI manifest for each client at installation time. Use this method to create a custom installation for each client, based on client characteristics discovered at installation time. **E:** AI Server Software Requirements include Software package repository Ensure that the install server can access an IPS software package repository. AI requires the install/installadm package. **F:** Install Server Requirements Any system that meets these requirements can be used as an AI install server, including laptops, desktops, virtual machines, and enterprise servers.

The install server can be either an x86 machine or a SPARC machine. An x86 install server can install both SPARC and x86 clients, and a SPARC install server can install both SPARC and x86 clients. Note: To install clients over the network, AI requires a separate system to be an install server. On the install server, create an AI install service to provide a net image and instructions for installing the Oracle Solaris 11 OS on different clients.
