NEW QUESTION: 2 A. Option AB. Option BC. Option CD. Option D **Answer: D** Explanation: Monitoring Storage Infrastructure Monitoring is one of the most important aspects that forms the basis for managing storage infrastructure resources. Monitoring provides the performance and accessibility status of various components. It also enables administrators to perform essential management activities. Monitoring also helps to analyze the utilization and consumption of various storage infrastructure resources. This analysis facilitates capacity planning, forecasting, and optimal use of these resources. Storage infrastructure environment parameters such as heating, ventilating and air-conditioning (HVAC) are also monitored. The key storage infrastructure components that should be monitored are: Servers Network Storage arrays These components could be physical or virtualized. Each of these components should be monitored for accessibility, capacity, performance and security. EMC E10-001 Student Resource Guide. Module 15: Managing the Storage Infrastructure

NEW QUESTION: 4 Which AAA Authorization type includes PPP, SLIP, and ARAP connections? **A.** auth-proxy **B.** network **C.** EXEC **D.** IP mobile **Answer: B** Explanation: Method lists for authorization define the ways that authorization will be performed and the sequence in which these methods will be performed. A method list is simply a named list describing the authorization methods to be queried (such as RADIUS or TACACS+), in sequence. Method lists enable you to designate one or more security protocols to be used for authorization, thus ensuring a backup system in case the initial method fails. Cisco IOS software uses the first method listed to authorize users for specific network services; if that method fails to respond, the Cisco IOS software selects the

next method listed in the method list. This process continues until there is successful communication with a listed authorization method, or all methods defined are exhausted. Method lists are specific to the authorization type requested:Auth-proxy--Applies specific security policies on a per-user basis. For detailed information on the authentication proxy feature, refer to the chapter "Configuring Authentication Proxy" in the "Traffic Filtering and Firewalls" part of this book.Commands--Applies to the EXEC mode commands a user issues. Command authorization attempts authorization for all EXEC mode commands, including global configuration commands, associated with a specific privilege level.EXEC--Applies to the attributes associated with a user EXEC terminal session. *Network--Applies to network connections. This can include a PPP, SLIP, or ARAP connection.Reverse Access--Applies to reverse Telnet sessions.When you create a named method list, you are defining a particular list of authorization methods for the indicated authorization type.Reference:
