NEW QUESTION: 1You manage a cloud service that hosts a customer-facing application. The application allows users to upload images and create collages. The cloud service is running in two medium instances and utilizes Azure Queue storage for image processing. The storage account is configured to be locally redundant. The sales department plans to send a newsletter to potential clients. As a result, you expect a significant increase in global traffic. You need to recommend a solution that meets the following requirements: Configure the cloud service to ensure the application is responsive to the traffic increase. Minimize hosting and administration costs. What are two possible ways to achieve this goal? Each correct answer presents a complete solution. **A.** Configure the cloud service to auto-scale when the queue exceeds 1000 entries per machine. **B.** Deploy a new cloud service in a separate data center. Use Azure Traffic Manager to load balance traffic between the cloud services. **C.** Configure the cloud service to auto-scale to three instances when processor utilization is above 80%. **D.** Configure the storage account to be geo-redundant **E.** Configure the cloud service to run in two Large instances.

Answer: A,C Explanation: Explanation/Reference: Explanation: An autoscaling solution reduces the amount of manual work involved in dynamically scaling an application. It can do this in two different ways: either preemptively by setting constraints on the number of role instances based on a timetable, or reactively by adjusting the number of role instances in response to some counter(s) or measurement(s) that you can collect from your application or from the Azure environment.

NEW QUESTION: 2 海上輸送ワークフローのメッセージ処理をサポートする必要があります。どの4つのアクションを順番に実行する必要がありますか？回答するには、適切なアクションをアクションのリストから回答領域に移動し、正しい順序で配置します。**Answer:** Explanation: Explanation Step 1: Create an integration account in the Azure portal You can define custom metadata for artifacts in integration accounts and get that metadata during runtime for your logic app to use. For example, you can provide metadata for artifacts, such as partners, agreements, schemas, and maps - all store metadata using key-value pairs. Step 2: Link the Logic App to the integration account A logic app that's linked to the integration account and artifact metadata you want to use. Step 3: Add partners, schemas, certificates, maps, and agreements Step 4: Create a custom connector for the Logic App. References: <https://docs.microsoft.com/bs-latn-ba/azure/logic-apps/logic-apps-enterprise-integration-metadata>
