NEW QUESTION: 3 Why is having two vDisks on the Provisioning Services server with write cache placed on the target device hard drive the best solution? **A.** This solution will simplify the planning phase because it does not require identification of the shared storage size and utilizes the existing storage infrastructure. **B.** This solution will allow one vDisk to be dedicated for the XenApp applications and one for the write cache, which will allow for the redirection of the persistent data. **C.** This solution will allow one vDisk to be used for the dedicated data collector and the second vDisk to be used for the main XenApp silo because the applications installed in the silo can affect the data collector. The storage is assigned to each virtual machine from optimized storage and provides fast response times. It also reduces load on the Provisioning Server and is not limited by RAM. **D.** This solution allows the creation of a separate silo for the CAD and HR applications, and reduces costs by utilizing the existing storage infrastructure. **Answer: A**
