NEW QUESTION: 2Your network contains an Active Directory domain named contoso.com. The domain contains three VLANs. The VLANs are configured as shown in the following table. All client computers run either Windows 7 or Windows 8. The corporate security policy states that all of the client computers must have the latest security updates installed. You need to

implement a solution to ensure that only the client computers that have all of the required security updates installed can connect to VLAN 1. The solution must ensure that all other client computers connect to VLAN 3. Solution: You implement the DHCP Network Access Protection (NAP) enforcement method. Does this meet the goal?**A.** No**B.** Yes**Answer: B**Explanation:

Implementing DHCP NAP to Enforce WSUS Updates

NEW QUESTION: 3Why do you need to split a machine learning dataset into training data and test data?**A.** To allow you to create unit tests in your code**B.** So you can use one dataset for a wide model and one for a deep model**C.** So you can try two different sets of features**D.** To make sure your model is generalized for more than just the training data**Answer: D**Explanation:

ExplanationThe flaw with evaluating a predictive model on training data is that it does not inform you on how well the model has generalized to new unseen data. A model that is selected for its accuracy on the training dataset rather than its accuracy on an unseen test dataset is very likely to have lower accuracy on an unseen test dataset. The reason is that the model is not as generalized. It has specialized to the structure in the training dataset. This is called overfitting.
